

Biokinetics provides specialized consulting, test and evaluation services, and research-oriented products that focus on injury prevention. Our expertise extends across the military, police/corrections, sports and transportation fields. Since the company's founding by James A. Newman in 1975, we have distinguished ourselves as one of the foremost authorities in life-threatening injury causation and prevention. Biokinetics works towards better product standards and evaluation methods to help ensure the effectiveness of emerging technologies. We have managed epidemiological studies, researched injury biomechanics and designed many different types of personal protective equipment. We remain on the leading edge of blast and ballistics survivability technologies and test methods.

As long as impact injuries happen, they can be prevented. Biokinetics is *Making an Impact on Human Safety.*
