

Ballistic Headform and Adjustable Base

Ballistic helmet and adjustable base for accurate assessment of behind helmet backface deformation

- Accurate and repeatable location of the ballistic helmet and headform to meet targeting and obliquity requirements.
- Provides fine adjustment of headform lateral translation, pitch and yaw.
- Quick connect attachment provided to remove the headform.
- Suitable for backface signature assessment of helmet shell with deformable clay headforms.
- Meets the testing requirements of NIJ 0106.01 for ballistic helmets and the ACH/ECH Purchase Description, among others.

Specifications

Headform:	NIJ 0106.01 style with fore-aft and lateral slots for ballistic clay.	Adjustable Base:	Precision lateral translation table with upper pivot adjustments for pitch and yaw. Locking clamps are provided for all adjustments.
Operation:	Manual operation of cranks and levers.	Part Number:	NBH-001

Physical and Electrical

Dimensions:	W 385 x D 405 x H 610 mm	Weight:	40 kg
Mounting:	Four slots for 1/4"-20 UNC thread bolts (not supplied)		

Warranty

All components:	1 year limited
